NOTE: This is a 'working draft' sequence. It currently consists of 33 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

No. is, the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                      3155

This sequence encours a mouse tange towns curptocorn, and has been isolated from a newborn mouse brain phage lambda-ZAP cDNA library using a 2:2-kb DNA probe from the Drosophila lats gene: (AAT42117). A homologous mouse sequence has also been isolated (m-lats, AAT42119). The gene encodes a putative protein-serine/threonine-kinase, and inhibits cell proliferation and plays a strine/threonine-kinase, and inhibits cell proliferation and plays a strine/threonine-kinase, and inhibits cell proliferation and plays a function (e.g. an antisense objectuciocide or dominant-negative proliferative disorders, degenerative disorders, trauma, growth deficiency, etc., and fragments of the gene may be used as diagnostic probes. A lats-inhibitor sequence may be expressed in a transgenic plant or farm animal to confer increased growth and inhibit enhancing proliferation encodes a mouse large tumour suppressor m-lats2 gene for é Claim 8; Page 133-137; 215pp; English. isolated large tumour suppressor inhibiting cell proliferation or sedneuce

Use of lats proteins, complexes of lats and cdc2 for treating cancer that is refractory to treatment by standard chemotherapy and radiation therapy, and disorders associated with aberrant levels of cdc2 activity

English. Claim 44; Pages 112-117; 134pp;

The present sequence is a DNA encoding mouse lats2 (large tumour supressor) protein which is a cell overproliferation inhibitor and a supressor) protein which is a cell overproliferation inhibitor and supressors protein and cell cycle-dependent kinase odds/cyclin.A.

The present sequence is useful for treating cancer that is refractory to standard chemotherapy or radiation therapy such as hyperplasia, or disorders associated with aberrant netaplasia, or dysplasia, and disorders associated with aberrant level for disorders, promoting cdc2 function include degenerative disorders, growth deficiencies, hypoproliferative disorders, in which a lats gene has been disrupted by homologous preferably a mouse, in which a lats gene has been disrupted by homologous compunds that can be used to treat or prevent cancer, particularly compounds that the lats associated with pituitary dysfunction e.g. luteinizing hormone (IH) associated with pituitary dysfunction e.g. luteinizing hormone (IH) hypogonadotropic hypogonadism. The lats DNA is also used in gene therapy.

human bone marrow cDNA library using a PCR fragment of hWART1 as probe. hWART2 is consistently expressed in human tumour cells lines. exceptor mast of the colon cancer lines examined. This coverexpression in tumour cells versus normal tissues may provide a target for oncology drug development. Nucleic acids encoding full-length hWART2 and hWART2 polypeptides lacking one or more of full-length hWART2 and hWART2 polypeptides lacking one or more of a more of a main acid segments 1.33, 43-139, 43-466, 467-480, 514-518, and 974-1048, or lacking one or more of the N-terminal domain, catalytic domain, or C-terminal domain are claimed, as well as a hwart sequences (AAXR3396), hWART2 and hWART1 polypeptides, antibodies, a method for identifying madulators of hWART function, and use of such modulator compounds to treat an abnormal condition involving hWART signal transduction, especially cancer. Probes for 8\*666666666666888

The present sequence encodes a human growth hormone inhibited tumour suppressor (hGHITS) protein. The hGHITS proteins can be used in an antihnoplastic pharmaceutical preparation. Probes for the hGHITS DNA sequences can be used in diagnostic pharmaceutical preparations can be used for examining expression of hGHITS genes in dwarfism, gigantism, acromegaly, angiopathy, diabetic nephropathy or cardiopathy, or in mallignant cumours including breast cancer, renal adenocarcinoma, colorectal cancer, and leukaemia. Antibodies against the proteins can be used in a diagnostic pharmaceutical preparation for examining expression of
                                                                                                                                                                                                                                                                                                     New human growth hormone inhibited tumour suppressor genes 1 and 2 diagnosis of dwarfism, gigantism, acromegaly, angiopathy, diabetic nephropathy or cardiopathy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a partial polypeptide which has kinase activity. The kinase polynucleotides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptides regulates, and proteins with which it might interact. The polypeptides can be used in section of antibodies. The antibodies can be used in assays to detect the presence of the protein, and to purify the protein

New human kinase polypeptides and polynucleotides used as molecular

```
a reagent to identify any proteins that the polypeptide regulates, and proteins with which it might interact. The polypeptides may also be used for preparation of antibodies. The antibodies can be used in assays to detect the presence of the protein, and to purify the protein
                                                                             The present sequence encodes a polypeptide which has kinase activity. The kinase polynucleotides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used as a reagent to identify any proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1721

The invention describes an isolated nucleic acid molecule (I) encoding a covel central nervous system protein. (I) and polypeptides (III) encoded cover cover control or treat a medical conditions and in diagnosis of a by (I), are used to treat a medical conditions and in diagnosis of a cutolmune diseases e.g. rheumatoid arthritis, hyperproliferative cutolmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. nervous system disorders e.g. Alzheimer's disease and amplobrophic lateral sclerosis, infections caused by bacteria, viruses c.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders c.g. orieral infection, gastrointestinal disorders e.g. disphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes disorders e.g. testicular feminisation, endocrine disorders e.g. cand pitutiary darfism, cancers and disorders at the cellular level e.g. coute kidney failure and blood related disorders e.g. myocardial cout from the polypeptides can also be used to aid wound healing and infarction. The polypeptides can also be used as a food additive or preservative to polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1732 GIGIGCCTCGCTTGTAAGCTGGACACTCACGCTCTGTACGCCATGAAGACTCTCAGGAAG 1791

The present cDNA sequence encodes human protein tyrosine kinase receptor (PTK) from clone HMTDB71.

(PTK) from clone HMTDB71.

The invention relates to human protein tyrosine kinase (PTK) receptors and their corresponding cDNA molecules. PTK receptors are useful in providing immunological probes for differential identification of the tissues or cell types present in a biological sample. PTK is used in methods for the diagnosis, prevention and treatment of various disorders immunodeficiency (SCID), inflammation); hyperpoinferative disorders (immunodeficiency (SCID), inflammation); hyperpoinferative disorders (neoplasm, sarcoidosis); cardiovascular disorders (multiple sclerosis), atherosclerosis); central nervous system disorders (multiple sclerosis), neurodegenerative disorders (Alzheimer's disease, Parkinson's disease); blood coaquiation disorders (Inflammatory disorders (asthma, called type); gastrointestinal disorders (inflammatory dosoders (asthma, called type); gastrointestinal disorders (inflammatory dosoders (asthma, called type); gastrointestinal disorders (inflammatory dosoders); health of carebrousesular disorders (inflammatory dosoders); disorders (uncomposed such as ovariam, concerts disorders (phenylketonuria); cancers (such as ovariam, concetts's disorders (phenylketonuria); cancers (such as ovariam, checkers); breast and lymphomas); behavioural disorders (roughorits); musculo-skeletal disorders (arthritis, trauma, tendonitis); renal disorders (nephrotic syndrome, glomerulonephritis); metastrases of malignancies and related disorders (leukaemia, multiple myeloma); and malignancies and related disorders (leukaemia, multiple myeloma); and "fortions caused by bacteria, viruses, fungi and parasities. PTK is also "fortions disease. PTK

Conditions treated by promoting cdc2 function include degenerative disorders, growth deficiencies, hypoproliferative disorders, physical trauma, lesions, and wounds. An animal model preferably a mouse, in which a lats gene has been disrupted by homologous recombination, e.g. a lats knock-out mouse, is used for screening recompounds that can be used to treat or prevent cancer, particularly skin cancer, soft tissue sarcomas and ovarian tumours, and disorders associated with pituitary dysfunction e.g. luteinizing hormone (LH) hypogonadotropic hypogonadism. The lats DNA is also used in gene therapy. 1218 1404 1464 1443 1503 CGCATCAAGAGTTACTCCCCTTATGCCTTCAAATTCTTCATGGAGCAACACGTGGAGAAT 1524 1705 ACTCTAGGCATCGGTGCCTTTGGGGAAGTGTGCCTCGCTTGTAAGCTGGACACTCACGCT 1764 CAACCTGAGCCCTCACTGCCCGCCCCCAACACGTCACCGCCGCGCGTGACGGCCGCACATC 1044 CTTCACCCTGTGAAGAGCGTGCGTGCTGCGGCCCCGAGCCCCAGACAGCCGTGGGGCCC 1104 919 CACTCTGCTAATTCTCAGCCTTCTGCCACTACAGTCACTGCCATCACACCCGCTCCTATT 978 Gaps TCAGTAAGTAAGCCCTGCAAAGATGAACAGCCTAGCTTACCCAAGGAAGATGATAGTGAG TCTAACTACAACCGGCTGAAGAGGGCCCAAGATGGACAAGTCCATGTTTGTGAAAATCAAG TCGCACCCCGCCTGGGTGCCTGCGCCCACAGCACCTGCCACTGAGAGGACGAAG CCACCGCCTCCGTATCCAAAGCACTTGCTGCTGCCCAGTAAGTCTGAGCAGTACAGCGTG GACCTGGACACCTGTGCACCAGTGTGCAGAGTCTGCGAGGGGGCACTGATCTAGAC GGGAGTGACAAGAGCCACAAAGGTGCGAAGGGAGACAAAAGCTGGCAGAGACAAAAAGCAG GTCATCAAAACCTACCAGCAGAAGGTCAGCCGGAGGCTACAGCTGGAGCAGGAAATGGCC AAAGCTGGGCTCTGTGAGGCCGAGCAGGAGCAGATGAGGAAGATCCTCTACCAGAAGGAG CGGGTTGGATTATCTCAAGATGCCCAGGATCAAATGAGAAAGATGCTTTGCCAGAAAGAG GAGGGCAGCGCAGGCCCACACCCGCTGGATGTGGACTATGGCGGCTCCGAGCGCAGGTGC GGTACAGCTTCAAGTGTGCCTGTCATCCCACCTGTTGCTGAAGCTCCAAGCTATCAAGGT The present sequence is a DNA encoding mouse Lats (large tumour suppressor) protein which is a cell overproliferation inhibitor anegative regulator of cell cycle-dependent kinase cdc2/cyclin A. 18; Length 3213 Score 812.6; DB 21; Length Pred. A homologous mouse sequence has also been isolated (AAT42120). The gene encodes a putative protein-serine/threonine-kinase, and inhibits cell proliferation and plays a serine/threonine-kinase, and inhibits cell proliferation and plays a serine/threonine-kinase, and inhibits. Activators or inhibitors of lats function (e.g. an antisense oligonucleotide or dominant-negative lats fragment) may be used in therapy of cancer or orher proliferative disorders, degenerative disorders, trauma, growth deficiency, etc., and fragments of the gene may be used as diagnostic probes. A lats-inhibitor sequence may be expressed in a transgenic

This sequence encodes a human large tumour suppressor h-lats protein, and has been isolated from a fetal human brain phage lambda-gt10 cDNA library using a 2.1-kb DNA probe from the mouse m-lats gene (AAT42119). The full-length cDNA is present in plasmid pBS(KS)-h-lats. The gene encodes a putative protein-serine/threonine-kinase, and inhibits cell proliferation and plays a crucial role throughout development. Activators or inhibitors of lats function (e.g. an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2012

The present sequence is useful for treating cancer that is refractory are standard chemotherapy or radiation therapy such as hyperplasia, metaplasia, and disorders associated with aberrant levels of cdc2 activity. Conditions treated by promoting cdc2 function include degenerative disorders, growth deficiencies, hypoproliferative disorders, physical trauma, lesions, and wounds. An animal model preferably a mouse, in which a lats gene has been disrupted by homologous recombination, e.g. a lats knock-out mouse, is used for screening compounds that can be used to treat or prevent cancer, particularly skin cancer, soft tissue sarcomas and ovarian tumours, and disorders associated with pituitary dysfunction e.g. luteinizing hormone (LH) hypogonadotropic hypogonadism. The lats DNA is also used in gene therapy. 1952 1832 1164 1404 2057 2117 1524 1584 1644 CAACCTGAGCCCTCACTGCCCGCCCCCAACACGGTCACGCCGTGACGGCCGCACACATC 1044 CTTCACCCTGTGAAGAGCGTGCGTGTGCTGCGGCCCGAGCCCCAGACAGCCGTGGGGCCC 1104 a The present sequence is a DNA encoding human Lats (large tumour suppressor) protein which is a cell overproliferation inhibitor and GGAACCGCTTCAAATGTGACTGTGATGCCACCTGTTGCTGAAGCTCCAAACTATCAAGGA ccaccaccaccacaaaacarcrecrecaaaaccarcrerrerrerrerre TCAATCAGTAAGCCTAGCAAAGAGGATCAGCCAAGCTTGCCCCAAGGAAGATGAGAGTGAA GGGAGTGACAAGAGCCACAAAGGTGCGAAGGGAGACAAAGCTGGCAGAGAAAAAGCAG CGCATCAAGAGTTACTCCCCTTATGCCTTCAAATTCTTCATGGAGCAACACGTGGAGAAT GTCATCAAAACCTACCAGCAGAAGGTCAGCCGGAGGCTACAGCTGGAGCAGGAAATGGCC **AAAGCTGGGCTCTGTGAGGCCGAGCAGGAGCAGATGAGGAAGATCCTCTACCAGAAGGAG** CGGGTTGGATTATCTCAAGATGCCCAGGATCAAATGAGAAAGATGCTTTGCCAAAAAGAA TCGCACCCCCCCCTGGGTGCCTGCGCCCCACTGCCCACTGAGAGCCTGGAGAAG ACACACCCTTCTTGGATACCACAGCCAATTCAAACTGTTCAACCCAGTCCTTTTCCTGAG GAGGGCAGCGCACACACCCGCTGGATGTGGACTATGGCGGCTCCGAGCGCAGGTGC CCACCGCCTCCGTATCCAAAGCACTTGCTGCTGCCCAGTAAGTCTGAGCAGTACAGCGTG GACCTGGACAGCCTGTGCACCAGTGTGCAGCAGAGTCTGCGAGGGGGCCACTGATCTAGAC CGTATTCAAAGTTATTCTCCTCAAGCATTTAAATTCTTTATGGAGCAACATGTAGAAAAT TCTAACTACAACCGGCTGAAGAGGGCCAAGATGGACAAGTCCATGTTTGTGAAAATCAAG DB 21; Length 3984; Indels Sequence 3984 BP; 1280 A; 847 C; 798 G; 1059 T; 0 other; 0; Mismatches 665; 24.1%; Score 760; DB 2; llarity 63.7%; Pred.                                                            the controlling Kindse Wart. IMPART, CHUR WAST. INCOLUGE.

human bone marrow CDMA library using PCR fragments of hWART1 as probes.

probes. 3 Polymorphisms were identified in the hWART1 gene: (1) at nuclectide 978, resulting in an Ala/Gly change; (2) at nuclectide 678, comprising a falletin of 2 adenosines, resulting in a C-terminal truncation of MART1 in the putative kinase domain. The latter frameshift hARRT1 in the putative kinase domain. The latter frameshift mutation was observed in 2 independent clones from human bone mutation was observed in 2 independent clones from human bone matation was observed in 2 independent clones from human cone. The control of hWART1 shows strong expression in cell lines from con small cell lung cancer, ovarian tumours, central nervous system one small cell lung cancer, ovarian tumours, and may provide a target tumors, renal tumours and breast tumours, and may provide a target tumors, renal tumours and breast tumours, and may provide a target tumors, renal tumours and breast tumours, and may provide a target tumors, renal tumours and breast tumours, and may provide a target con forcology drug development. Nucleic acids encoding full-length human to the man development and human development and human development. Segments 12-45, 55-151, 236-377, 404-520, 555-559, 601-702, 691-998 and 1011-1086, or lacking one or more of the N-terminal domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GGGAGTGACAAGAGCCACAAAAGGTGCGAAGGGAGACAAAGCTGGCAGAGACAAAAAGCAG 1404
